

DINESH BEHERA

Senior Technical Consultant | Cloud & Platform Engineer | OpenShift | OpenStack | DevOps & Automation

Odisha, India | dinesh.behera@prodevans.com | [LinkedIn](#)

PROFESSIONAL SUMMARY

Cloud/platform and DevOps professional with 5+ years of enterprise experience across Red Hat OpenShift, Kubernetes, OpenStack, Linux/Windows, Ansible automation, cloud deployments, storage, monitoring and technical consulting. Strong in production troubleshooting, upgrade readiness, operational audits, health/utilization reporting, backup/rollback planning, RCA and evidence-driven documentation. Combines hands-on platform engineering with customer-facing delivery and technical training leadership.

TECHNICAL SKILLS

Platforms: OpenShift, Kubernetes, OpenStack, Docker, Podman, Helm | **Cloud/Virtualization:** AWS, GCP, VMware, Hyper-V | **Automation/laC:** Ansible, AWX/AAP, Python, Bash/Shell, Terraform | **CI/CD:** Git, GitHub, GitLab, Jenkins, GitHub Actions, GitLab CI, GitOps | **Systems:** RHEL, Ubuntu, CentOS, Windows Server, PowerShell, DNS, SSH | **Storage/Observability:** HPE 3PAR, HPE CSI, PV/PVC, snapshots, Prometheus, Grafana, Zabbix, Dynatrace, Harbor | **Data:** PostgreSQL, MySQL, SQL, Excel, openpyxl

PROFESSIONAL EXPERIENCE

Senior Technical Consultant / Cloud & Platform Engineer | Prodevans Technologies |

Jan 2021 - Present

Bhubaneswar / Client Sites

Deliver cloud, platform and infrastructure consulting across OpenShift/Kubernetes, OpenStack, Linux/Windows, automation, storage, monitoring and DevOps environments.

Perform production cluster health checks, upgrade-readiness analysis, node/workload diagnostics, backup validation, capacity/utilization assessment, incident troubleshooting and post-change validation.

Create SOPs, MOPs, RCAs, audit reports, implementation/rollback plans, architecture notes and customer-facing technical documentation; coordinate with OEM/vendor, application, network/security, storage and database teams.

Key Enterprise Engagement - Odisha State Data Centre (OSDC)

OpenShift lifecycle: assessed operators, cluster conditions, machine configuration pools, node health and upgrade graph; prepared staged upgrade plans with dependency, networking, maintenance-window and rollback considerations.

Executed/validated platform evidence collection and backup workflows including etcd backup, must-gather and vendor support case packages; analyzed CSI/operator and storage dependencies.

Investigated HPE CSI snapshot/PV issues, controller health and storage-side validation; supported HPE 3PAR capacity/reclamation analysis against active OpenShift PV inventory.

Produced production infrastructure utilization and multi-day health reports correlating node, pod, storage and application observations; conducted OpenStack audit/inventory and utilization analysis via CLI/Horizon.

Supported data-centre troubleshooting across virtualization, Linux/Windows, DNS, registry, MySQL Router connectivity, remote access and monitoring.

Additional Enterprise Delivery

Banking automation: developed Ansible playbooks for execution, patching and audit processes; automated AAP/AWX reporting for users, projects, job templates and execution analysis.

GCP/Kubernetes: deployed Kubernetes on Google Cloud, configured Anthos Service Mesh, onboarded/exposed applications, enabled autoscaling and performed load testing.

AWS/Ansible: automated VM provisioning, provisioned/configured GitLab and delivered implementation documentation.

Python ETL: built openpyxl-based logic to search large Excel files, normalize input errors, persist data to SQL, generate output workbooks and archive source files.

SELECTED TECHNICAL PROJECTS

OpenShift Upgrade & Support Readiness: Multi-stage upgrade planning, operator/CSI dependency review, networking transition considerations, maintenance/rollback planning, vendor coordination and evidence collection.

OpenShift Storage / HPE CSI: Snapshot/PV incident diagnostics, controller/node validation, targeted log capture, controlled service restart and storage-side validation.

OpenStack Audit & Utilization: Project/compute/network/volume inventory, administrative validation and detailed utilization/audit reporting through CLI and Horizon.

HPE 3PAR Reclamation: Cross-checked storage volumes against active PV inventory and used staged validation to identify safe reclamation candidates.

Monitoring & Observability: Zabbix/Grafana implementation and assessment, Prometheus metrics and Dynatrace proof-of-concept support.

MySQL Router RCA: Diagnosed database connectivity, routing ports, DNS and client compatibility; validated post-change service health and documented remediation.

Forward Proxy Design: Evaluated open-source options and designed OPNsense + Squid for Internet access, URL/web filtering and ACL enforcement.

LEADERSHIP & TRAINING

CEO / Lead Instructor | ProLEAP Academy | Concurrent

Current

Lead hands-on DevOps/cloud training; design roadmaps, labs, assignments, capstones and live debugging sessions.

Designed/delivered a 45-day DevOps Foundation covering Linux, Git/GitHub, Bash/Python, AWS, CI/CD, Terraform, Ansible, Docker, Kubernetes, Helm, Prometheus/Grafana and GitOps.

Run Python and Technical Documentation bootcamps; maintain technical repositories, SOPs and learning assets.

Chief Business Officer (CBO) | PDCloudEX | Concurrent

Current

Support cloud-platform positioning, customer/partner communication, solution enablement and business/technical coordination around cloud, virtualization and platform services.

EDUCATION

B.Tech, Mechanical Engineering - National Institute of Science & Technology (NIST), Berhampur, Odisha

Biju Patnaik University of Technology (BPUT) | 2017 - 2021

CERTIFICATIONS & CREDENTIALS

HackerRank: Problem Solving (Basic & Intermediate), Python (Basic), SQL (Basic). LinkedIn learning/skill credentials: AWS, GCP, Linux, Python, Visio, Android.

DOCUMENTATION & DELIVERY STRENGTHS

SOP/MOP, RCA, change and rollback plans, architecture diagrams, operational audits, health/utilization reports, customer presentations, requirements clarification, cross-team coordination, evidence-first troubleshooting and automation-first execution.
