

DINESH BEHERA

Senior Technical Consultant | Cloud & Platform Engineering | DevOps, Automation & Infrastructure

Odisha, India | dinesh.behera@prodevans.com | [LinkedIn](#)

PROFESSIONAL SUMMARY

Cloud, platform and DevOps professional with 5+ years of experience spanning enterprise infrastructure operations, OpenShift/Kubernetes administration, OpenStack, Linux/Windows systems, automation, cloud deployments, storage, monitoring, technical documentation and customer-facing consulting. Hands-on in production troubleshooting, health and utilization assessments, upgrade-readiness analysis, backup/rollback planning, infrastructure audits, incident RCA, and automation using Ansible, Python and shell scripting. Combines deep technical execution with documentation discipline, training delivery and leadership experience through ProLEAP Academy and PDCloudEX.

CORE EXPERTISE

Cloud & Platforms	Red Hat OpenShift, Kubernetes, OpenStack, AWS, GCP, VMware, Hyper-V
Automation & DevOps	Ansible/AWX/AAP, Python, Bash/Shell, Git/GitHub/GitLab, Jenkins, Terraform, CI/CD, GitOps
Infrastructure Operations	Linux (RHEL/Ubuntu/CentOS), Windows Server, DNS, networking, proxy, registry, storage, backup/restore
Observability & Data	Prometheus, Grafana, Zabbix, Dynatrace, Harbor, MySQL/PostgreSQL, Excel/openpyxl, technical reporting

PROFESSIONAL EXPERIENCE

Senior Technical Consultant / Cloud & Platform Engineer | Prodevans

Jan 2021 - Present

Technologies | Bhubaneswar / Client Sites

Deliver enterprise cloud, platform and infrastructure consulting across OpenShift/Kubernetes, OpenStack, Linux/Windows, automation, storage, monitoring and DevOps engagements.

Operate and troubleshoot production container platforms, performing cluster health checks, upgrade-readiness reviews, node/workload analysis, backup verification, incident diagnostics and capacity/utilization reporting.

Develop SOPs, MOPs, RCA documents, audit reports, architecture notes, implementation plans and customer-facing technical documentation for infrastructure and application teams.

Coordinate with OEM/vendor support, project teams, application owners, network/security, storage and database teams to drive issue resolution and change execution.

Selected Enterprise Engagement - Odisha State Data Centre (OSDC)

OpenShift operations and lifecycle planning: assessed cluster conditions, operators, machine configuration pools, node health and upgrade graph; prepared staged upgrade approach with compatibility, maintenance-window and rollback considerations.

Performed control-plane backup validation and upgrade prechecks, including etcd backup workflows, cluster must-gather collection, vendor case coordination and evidence packaging for support engagement.

Investigated storage and CSI issues involving enterprise HPE storage, snapshots and persistent volumes; validated controller health, collected targeted logs/evidence, and supported recovery/reclamation analysis.

Produced infrastructure utilization and 7-day health reports for production workloads, correlating node, pod, storage and application observations into decision-ready operational reports.

Conducted OpenStack administration/audit activities through Horizon and CLI, including project/resource inventory, utilization assessment and access/operational validation.

Supported broader data-centre operations across virtualization, Linux/Windows systems, DNS, registry access, MySQL Router connectivity, remote access, monitoring and infrastructure troubleshooting.

Automation & Cloud Delivery Engagements

Banking automation: developed Ansible playbooks to replace manual execution, patching and audit processes; automated AAP/AWX reporting for users, projects, job templates and execution analysis; implemented checksum-based handling for patch artifacts.

GCP/Kubernetes engagement: deployed Kubernetes on Google Cloud, configured Anthos Service Mesh, onboarded/exposed applications, enabled autoscaling and executed load testing to validate scaling behavior.

AWS/Ansible engagement: automated VM provisioning on AWS, provisioned and configured GitLab, and delivered customer-facing implementation documentation.

Python ETL engagement: built Excel-to-database processing logic using Python/openpyxl to search large workbooks, normalize human-input issues, persist data to SQL, generate output workbooks and archive inputs.

Business analysis/documentation engagement: defined process flows, consolidated operational data, created customer presentations and maintained structured technical documentation for consulting workstreams.

SELECTED TECHNICAL PROJECTS & OPERATIONAL WORK

OpenShift Upgrade & Support Readiness: Built detailed multi-stage upgrade-readiness documentation for an enterprise OpenShift estate, covering prechecks, operator/CSI dependencies, networking transition considerations, maintenance planning, rollback, evidence collection and vendor-support coordination.

OpenShift Storage / HPE CSI Troubleshooting: Investigated snapshot and persistent-volume issues, validated CSI controller/node components, restarted affected controller services in a controlled manner, captured logs/evidence and supported storage-side validation.

OpenStack Full Audit & Utilization: Collected and analyzed OpenStack project, compute, network, volume and administrative inventory through CLI/Horizon; generated detailed utilization and audit outputs for operational review.

HPE 3PAR Capacity & Reclamation Analysis: Cross-checked storage volumes against active OpenShift PV inventory to identify reclaim candidates safely; used batch validation and storage-side confirmation to reduce risk.

Monitoring & Observability POCs: Implemented/assessed Zabbix and Grafana monitoring, Prometheus-based platform metrics and Dynatrace proof-of-concept requirements for infrastructure and workload visibility.

MySQL Router / Client Compatibility RCA: Diagnosed application/database connectivity, routing ports, DNS and client compatibility; validated post-change service state and documented root cause and remediation.

Forward Proxy Architecture: Evaluated open-source forward-proxy options and designed an OPNsense + Squid approach for Internet access, URL/web filtering and ACL enforcement in data-centre environments.

Secure DevOps & Repository Operations: Managed Git/GitHub/GitLab workflows, SSH key-based access, repository governance, CI/CD-oriented project structures and documentation for training and engineering use cases.

LEADERSHIP, TRAINING & KNOWLEDGE ENABLEMENT

Chief Executive Officer / Lead Instructor ProLEAP Academy Concurrent leadership role	Current
Lead technical-skilling initiatives focused on job-oriented, hands-on DevOps, cloud and engineering training; design course roadmaps, labs, assignments, capstones and live troubleshooting sessions.	
Designed and delivered a 45-day DevOps Foundation program spanning Linux, Git/GitHub, Bash/Python automation, AWS, CI/CD, Terraform, Ansible, Docker, Kubernetes, Helm, Prometheus/Grafana and GitOps-oriented project work.	
Run focused Python and Technical Documentation bootcamps and mentor learners on practical engineering execution, debugging, documentation quality and portfolio/GitHub readiness.	
Maintain technical content, repositories, SOPs and web/learning assets used for academy operations and delivery.	
Chief Business Officer (CBO) PDCloudEX Concurrent leadership role	Current
Support cloud-platform positioning, customer/partner communication, solution enablement and business/technical coordination around cloud, virtualization and platform services.	

DOCUMENTATION & CONSULTING STRENGTHS

SOP/MOP creation, RCA, change plans, rollback plans, audit reports, capacity/utilization reports and operational health assessments

Architecture and solution documentation using Visio/Draw.io; presentation and template design using Canva/Figma and related tools

Customer-facing workshops, technical consultation, cross-team coordination, requirements clarification and execution tracking

Clear conversion of CLI/log evidence into concise executive summaries and detailed engineering reports

TECHNICAL SKILLS

Container & Platform: OpenShift, Kubernetes, OpenShiftSDN/OVN migration concepts, Helm, Docker, Podman, namespaces/projects, RBAC, operators, CSI, snapshots, cluster health and upgrade workflows

Cloud & Virtualization: OpenStack, AWS, GCP, VMware, Microsoft Hyper-V, IaaS/PaaS concepts, VM provisioning, networking, storage integration

Automation / IaC: Ansible, AWX, Ansible Automation Platform, Python, Bash/Shell, Terraform, automation reporting, patch automation

CI/CD & Source Control: Git, GitHub, GitLab, Jenkins, GitHub Actions, GitLab CI concepts, SSH authentication, branching/PR workflows, GitOps practices

Operating Systems: RHEL, Ubuntu, CentOS, Linux administration, Windows Server, PowerShell, remote administration, DNS and service troubleshooting

Storage / Data Protection: HPE 3PAR, HPE CSI, PV/PVC lifecycle, snapshots, capacity/reclamation analysis, backup/restore validation

Monitoring / Registry: Prometheus, Grafana, Zabbix, Dynatrace, Harbor registry, platform metrics, health and utilization reporting

Databases / Data: PostgreSQL, MySQL client/router troubleshooting, SQL, Excel, openpyxl, ETL and structured data consolidation

Documentation / Design: Confluence, Visio, Draw.io, Canva, Figma, technical documentation, business analysis, presentations, video editing (DaVinci Resolve/PhotoScape)

Languages: Python, Shell/Bash, C, Java (foundational/working exposure), SQL

EDUCATION

Bachelor of Technology (B.Tech), Mechanical Engineering - National Institute of Science & Technology (NIST), Berhampur, Odisha

Biju Patnaik University of Technology (BPUT) | 2017 - 2021

CERTIFICATIONS & LEARNING CREDENTIALS

HackerRank - Problem Solving (Basic)

HackerRank - Problem Solving (Intermediate)

HackerRank - Python (Basic)

HackerRank - SQL (Basic)

LinkedIn Learning / skill credentials - AWS, Google Cloud Platform, Linux, Python, Visio and Android (as listed in earlier professional profile/CV)

PROFESSIONAL METHODS & DELIVERY PRACTICES

Production-safe troubleshooting: evidence first, impact assessment, rollback planning, controlled execution and post-change validation

Operational reporting: convert command output, logs and platform metrics into structured findings, risks, recommendations and action items

Change coordination: work across application, platform, network, security, storage, database and vendor/OEM teams

Automation-first mindset: replace repeatable manual steps with scripts/playbooks while preserving auditability and rollback paths

Documentation discipline: maintain clear assumptions, scope, prerequisites, exact commands, validations, limitations and ownership boundaries

ADDITIONAL TOOLS & WORKING EXPOSURE

Asana, Trello, Slack, Confluence, Microsoft Office/Excel, PowerShell, systemd, SSH, curl, dig/nslookup, Git, CLI-based diagnostics, technical videography and content production.

LANGUAGES

English | Hindi | Odia

REPRESENTATIVE DELIVERABLES

OpenShift/OpenStack health checks, utilization assessments, upgrade-readiness reports and operational audit packs

SOPs, MOPs, RCAs, implementation/rollback plans, vendor-support evidence packs and post-change validation reports

Ansible playbooks, Python/openpyxl automation, shell-based diagnostic collections and repeatable CLI evidence gathering

Training repositories, lab guides, technical assignments, architecture diagrams and customer-facing presentations
